

Aurora

Inter dimensional computation | IDC™

ARCHITECTURE OVERVIEW

Six integrated engines form a proposed trust architecture for intelligent systems.

Dimensional Ethics™ Engine

Ethical reasoning substrate.
Explores competing perspectives in the SnakePit™ intertwine before decisions propagate.

Integral Dimensional Time | IDT™

Models time as a semantic topological manifold.
Trust evolves across temporal contexts, causal relationships and possible futures.

Peripheral Enlightenment™ Engine

Expands contextual awareness beyond immediate observations to reveal hidden relationships and blind spots.

Multi LoGiC™ Engine

Contextual gatekeeper.
Evaluates intent and governs permissible participation under ethical constraints.

RealTime Transparency Scroll | RTTs™

Runtime decision lineage.
Records constraints, alternatives and reasoning for inspection and verification.

Mantis Shrimp™ Vision

Multi-dimensional perception layer that synthesises diverse informational perspectives simultaneously.

SIMPLE BY DESIGN

Minimal attack surfaces.
Bounded authority.

UNDERSTANDABLE BY DEFAULT

Transparent components.
Explainable decisions.

TRUST THROUGH INTELLIGENCE

Human agency at the core.
A safer tomorrow.
